

**cloud three**  
digital orthodontics  
scan - print - create

# cloud 3 digital orthodontics

combines the latest in rapid prototyping technology with your intra oral scans or scanned impressions to produce high resolution models with more accuracy, faster turn around and greater cost efficiency. *It's as easy as:*

## Scan

Send us your digital scans  
*OR* We can scan your models  
from impressions.

## Print

We will print your individual  
or multiple sequential models  
at the global benchmark  
resolution of 16 microns.

## Create

We can create the full range  
of the appliances you require  
including sequential aligners.

# High Resolution 3D Printing

Our Eden 350V 3D printer can print your digital models in the global benchmark highest resolution of 16 micron. We can also create sequential aligners by scanning models from your impressions.

# Faster Turn-Around

We can receive your digital models instantaneously using our easy to use secure cloud based FTP file transfer system. This enables us to start on your jobs faster, reducing turn around times.

# Create whatever you require

We can create the full range or orthodontic appliances.

# No More Messy Impressions

3D printed Study Models are a cost effective, time efficient, robust and reproducible alternative to traditional plaster study Models.
